6. Ancient Dynasties — From / To, Founder, Last Ruler, High-Yield

Magadha spine (do not skip a rung): **Haryanka → Shishunaga → Nanda → Maurya → Shunga → Kanva**.

Dynasty	Period (from–to)	Founder	Last ruler	Capital	Key ruler & high-yield
Haryanka	**c. 544–412 BCE**	**Bimbisara** (Shrenika; annexes **Anga**; contemporary of Buddha & Mahavira)	**Nagadasaka** (weak tail; minister Shishunaga takes the throne)	**Rajagriha / Girivraja**	**Ajatashatru** — *rathamusala*, war on Vajji, **1st Buddhist Council** (Rajagriha). **Udayin** first makes **Pataliputra** the Magadhan capital (Ajatashatru only seeds Pataligrama).
Shishunaga	**c. 412–344 BCE**	**Shishunaga** (ex-viceroy of Kashi)	**Nandivardhana / Mahanandin** (overthrown by Mahapadma Nanda)	Girivraja → **Vaishali** (second capital tradition)	Founder **takes Avanti / Malwa** (ends Pradyota). **Kalashoka / Kakavarna** — **2nd Buddhist Council** at Vaishali (schism). Did **not** found Pataliputra.

Dynasty	Period (from–to)	Founder	Last ruler	Capital	Key ruler & high-yield
Nanda	**c. 344–321 BCE**	**Mahapadma Nanda** (*Ekarat*, *Sarvakshatrantaka*, *Ugrasena*, *Aparoparashurama*)	**Dhana Nanda** (Greek **Agrammes / Xandrames**; commander Bhaddasala)	**Pataliputra**	Nine Nandas. Huge standing army; **Alexander never fought** them (326 BCE is still Dhana Nanda's reign). Hathigumpha later recalls a Nanda canal and a Jina image from Kalinga. Overthrown by **Chandragupta + Chanakya**.
Maurya	**c. 321–185 BCE**	**Chandragupta Maurya** (Greek *Sandrokottos*; Chanakya / Kautilya; treaty with Seleucus **c. 303 BCE**)	**Brihadratha** (killed by general **Pushyamitra Shunga**, 185 BCE)	**Pataliputra** (Ganga–Son)	**Bindusara** (*Amitraghata*). **Ashoka**: accession c. 272, coronation **268–232**; **Kalinga War 261 BCE** (MRE XIII); **3rd Council** at Pataliputra. Ashoka's death **232 ≠** end of empire — house runs to **185**.
Shunga	**185–73 BCE**	**Pushyamitra Shunga** (coup at a military review)	**Devabhuti** (killed / ousted by Vasudeva Kanva)	Pataliputra & **Vidisha**	Two **ashvamedhas** (Ayodhya / Dhanadeva record). **Agnimitra** (अग्निमित्र) in Kalidasa's (कालिदास) *Malavikagnimitra* (मालविकाग्निमित्रम्). **Patanjali** (*Mahabhashya* (महाभाष्य)) is Shunga-age, not Kanishka's court. Sanchi still grows.
Kanva	**73–28 BCE**	**Vasudeva Kanva**	**Susarman**	Pataliputra	Short Magadha coda after Shungas. Deccan **Satavahanas** rise as this house fades.
Satavahana (Andhra)	**c. 230 BCE – 3rd c. CE**	**Simuka**	Last great often **Yajna Sri Satakarni** (later Pulomavi line)	**Pratishthana (Paithan)** & Amaravati	**Gautamiputra Satakarni** — *Ekabrahmana*, *Trisamudrapitapoyavahana* (Nasik cave of mother **Gautami Balashri**); smashed Western Kshatrapas. **Lead & potin** coins; matrilineal *Gautamiputra / Vasisthiputra* titles. **Hala** — Prakrit *Gatha Saptasati*. Yajna Sri — **ship** on coins.
Kushana	**1st–3rd c. CE**	**Kujula Kadphises** (Kadphises I)	Last great **Vasudeva I** (then fragmentation)	**Purushapura (Peshawar)** & **Mathura**	**Vima Kadphises** — first Kushana **gold** (*dinar*). **Kanishka** — **Shaka era 78 CE** (some books peak c. 127); **4th Council** at Kundalvana (Kashmir); Gandhara + Mathura art; titles *Devaputra*. Do not make Kanishka a Gupta.
Gupta	**c. 320–550 CE**	**Sri Gupta** → **Ghatotkacha** (both *Maharaja*); real imperial start **Chandragupta I** (**Maharajadhiraja**, Gupta era **319/320 CE**, queen **Kumaradevi**)	Last great **Skandagupta**; later line thins (e.g. Vishnugupta)	**Pataliputra** (CG II also uses **Ujjain**)	**Samudragupta** — Prayag Prashasti by **Harisena**; *Napoleon of India*; Aryavarta uprooted, Dakshinapatha captured-and-freed. **Chandragupta II Vikramaditya** — *Sakari*, ends Western Kshatrapas (Rudrasimha III); Mehrauli iron pillar; Fa-Hien. **Kumaragupta I** — Nalanda tradition. **Skandagupta** — **Bhitari** (Ghazipur, UP) vs **Hunas**; repairs Sudarsana lake.

Dynasty	Period (from–to)	Founder	Last ruler	Capital	Key ruler & high-yield
Vakataka	**c. 250–500 CE**	**Vindhyashakti**	**Harishena** (Vatsagulma branch; Ajanta later caves)	**Vatsagulma** (Washim) / Nandivardhana	**Pravarasena I** — four *ashvamedhas*. Gupta–Vakataka tie: **Prabhavatigupta** (daughter of CG II) married **Rudrasena II** and ruled as regent.
Maukhari	**6th c. CE** (till **c. 606**)	**Harivarman**	**Grahavarman**	**Kannauj** (Kanyakubja, UP)	Grahavarman married **Rajyashri** (Harsha's sister); killed by **Deva Gupta of Malwa** + **Shashanka** of Gauda — the spark for Harsha's rise.
Pushyabhuti (Vardhana)	House earlier; **Harsha 606–647 CE**	**Pushyabhuti** (house); effective reunion king **Harshavardhana**	**Harsha** (no stable heir after **647**; Wang Xuance / Arunashva)	Thanesar → **Kannauj**	**Harsha-samvat 606**. Xuanzang (*Si-Yu-Ki*). Kannauj & Prayag assemblies. Stopped on the **Narmada** by **Pulakeshin II**. Banabhatta — *Harshacharita*. Not a Gupta emperor.
Badami Chalukya	**543–753 CE**	**Pulakeshin I**	**Kirtivarman II** (overthrown by Rashtrakuta **Dantidurga**)	**Vatapi (Badami**, Karnataka)	**Pulakeshin II** — defeats Harsha on Narmada; **Aihole / Meguti** prashasti by Jain poet **Ravikirti** (रविकीर्ति) (names **Kalidasa** (कालिदास) & **Bharavi** (भारवि)). Clash with Pallavas (Narasimhavarman I sacks Vatapi — *Vatapikonda*).
Pallava of Kanchi	**c. 575–897 CE**	**Simhavishnu** (imperial line)	**Aparajita** (defeated by Chola **Aditya I**)	**Kanchipuram**	**Mahendravarman I** — *Mattavilasa Prahasana*; rock-cut start. **Narasimhavarman I Mahamalla** — defeats Pulakeshin II; **Mamallapuram** rathas / shore temple age.

Logic: Maurya **321–185**, not 321–232. Gupta **320–550**, not "ends with Chandragupta II." Harsha **606–647** is Pushyabhuti, not Gupta. Shunga **185** is the Mauryan end, not Kalinga (261).

F. Mansabdari System Essentials (Akbar to Aurangzeb)

- **Introduced by Akbar (1571 CE)**: Military-administrative ranking system borrowed from the Mongol decimal system; ranged from rank of 10 to 5,000 (later 7,000 for top royal princes/nobles like Raja Man Singh).
- **Dual Ranks (Zat & Sawar)**:
- **Zat (जात)**: Denoted personal rank, social status, precedence at court, and fixed the personal baseline salary.
- **Sawar (सवार)**: Denoted the actual number of cavalry troops and horses the officer was required to maintain for imperial service.
- **Three Classes of Mansabdars**:
- *Class 1*: Sawar rank = Zat rank.
- *Class 2*: Sawar rank = Half or more of Zat rank.
- *Class 3*: Sawar rank = Less than half of Zat rank.
- **Dah-Bishi Rule (10-20 Rule)**: For every 10 cavalrymen (*Sawars*), the Mansabdar had to maintain **20 horses** (to avoid exhaustion of war mounts during campaigns).
- **Dagh and Chehra**: Instituted by Alauddin Khalji, revived by Sher Shah, and formalized by Akbar:
- *Dagh*: Royal branding of war horses to prevent fraudulent substitution.
- *Chehra / Tashiha*: Descriptive roll / biometric identity of every soldier.
- **Du-aspa Sih-aspa (दो-अस्पा सिह-अस्पा)**: Introduced by **Jahangir**; allowed favored nobles to double their maintained cavalry force and salary allocation **without increasing their base Zat rank**.
- **Month-Scale System (*Mahana*)**: Introduced by **Shah Jahan**; due to divergence between estimated revenue (*Jama*) and actual realization (*Hasil*), Mansabdars were paid on 4-month, 6-month, or 8-month pay scales instead of full 12-month pay.

- **Nayankara System**:
- Distinctive military-tenurial system of Vijayanagara.

- Documented in detail by Portuguese travelers **Domingo Paes** and **Fernao Nuniz**.
- **Ayagar System**:
- Unique village autonomous administrative organization in South India.
- Every village was an autonomous unit managed by a council of **12 hereditary functionaries** called **Ayagars** (Headman/Gaud, Accountant/Karnam, Blacksmith, Carpenter, Washerman, Barber, etc.).
- Ayagars were granted hereditary tax-free plots of land called **Manyam** and received customary grain shares from the villagers.
- **Key Vijayanagara Administrative Terms**:

- **Kandachara (कंदाचार)**: Military department presided over by the *Dandanayaka* (Commander-in-Chief).

1. The 8 Classical Dances of India (Recognized by Sangeet Natak Akademi)

Dance Form	State of Origin	Key Pioneers & Revivalists	Notable Exponents	Distinctive Features, Repertoire & Exam Keywords
Bharatanatyam	**Tamil Nadu**	**E. Krishna Iyer**, **Rukmini Devi Arundale** (founder of Kalakshetra Foundation)	Yamini Krishnamurthy, Padma Subrahmanyam, Alarmel Valli, Mrinalini Sarabhai	Regarded as the **oldest classical dance** of India, originating from ancient temple dancer (*Devadasi*) traditions where it was historically known as *Sadir* or *Dasi Attam*. It symbolizes the element of fire (*Agni*) and features the characteristic half-sitting stance termed **Araimandi**. A complete traditional recital follows the structured sequence: *Alarippu* → *Jatiswaram* → *Shabdam* → *Varnam* → *Padam* → *Tillana*. It is performed in the *Ekaharya* format, wherein a single performer assumes and portrays multiple roles.
Kathak	**Uttar Pradesh**	**Lady Leela Sokhey** (Madame Menaka), **Nawab Wajid Ali Shah** (patron of Lucknow Gharana)	**Pt. Birju Maharaj**, Sitara Devi, Shambhu Maharaj, Lachhu Maharaj, Damayanti Joshi	The name derives from the ancient aphorism *"Katha Kahe So Kathak Kahave"* (one who recites stories is a Kathak). The dance is characterized by intricate and swift rhythmic footwork (**Tatkar**), dazzling pirouettes (**Chakkars**), expressive gait narratives (*Gat Nikas*), and dynamic rhythmic contests (*Jugalbandi*) with the tabla. Its major gharanas include **Lucknow** (famed for grace, *Bhava*, and subtle mime), **Jaipur** (distinguished by fiery footwork, speed, and *Veer rasa*), **Banaras**, and **Raigarh**.
Kathakali	**Kerala**	**Vallathol Narayana Menon** (founder of Kerala Kalamandalam)	Kalamandalam Gopi, Guru Kunchu Kurup, Raman Kutty Nair	A grand visual dance-drama enacting epic narratives from the Ramayana and Mahabharata. It is celebrated for its elaborate facial makeup (*Chutti*) and ornate towering headgear. Character types are defined by strict symbolic facial colors: **Pacha** (green makeup, depicting divine heroes and noble kings), **Kathi** (knife-shaped red streaks on green with a white nose-knob, representing arrogant royalty and villains), **Thadi** (bearded characters: red/black for evil demons, white for pious figures like Hanuman), and **Minukku** (warm yellow/flesh tone, representing virtuous women and sages).

Dance Form	State of Origin	Key Pioneers & Revivalists	Notable Exponents	Distinctive Features, Repertoire & Exam Keywords
Kuchipudi	**Andhra Pradesh**	**Siddhendra Yogi** (creator of *Bhamakalapam*)	Yamini Krishnamurthy, Raja & Radha Reddy, Swapnasundari	Named after its village of origin, Kuchelapuram in Krishna district, this form developed as a dance-drama tradition combining spoken dialogue, classical singing, and dance. Its most celebrated virtuoso feature is the **Tarangam**, in which the dancer deftly balances upon the raised rim of a brass plate while carrying a brass water pitcher (*Kundi*) balanced steadily atop the head.
Odissi	**Odisha**	**Kelucharan Mohapatra**, Pankaj Charan Das, Deba Prasad Das	Sonal Mansingh, Sanjukta Panigrahi, Madhavi Mudgal	Deeply rooted in temple rituals, its lineage traces back to female temple dancers (*Maharis*) and juvenile male performers (*Gotipuas*). The performance repertoire is heavily inspired by Jayadeva's devotional masterpiece, the *Gita Govinda*. It is distinguished by two fundamental body postures: the feminine, soft, three-bend deflective stance (**Tribhanga**) and the firm, square, masculine stance (**Chowk**).
Sattriya	**Assam**	**Mahapurusha Srimanta Sankardeva** (15th century)	Bhabananda Barbayan, Jatin Goswami, Ghanakanta Bora	Created as an instrument of the Neo-Vaishnavite Bhakti movement, this sacred dance form was nurtured for over five centuries inside monastic sanctuaries known as **Sattras**. Its musical and theatrical foundation rests upon *Borgeet* (devotional songs) and *Ankiya Nat* (one-act devotional plays). The Sangeet Natak Akademi officially recognized Sattriya as India's 8th classical dance in **November 2000**.
Manipuri	**Manipur**	**King Bhagyachandra** (Ningthou Ching-Thang Khomba), **Rabindranath Tagore** (introduced at Santiniketan)	Guru Bipin Singh, Jhaveri Sisters (Nayna, Suvarna, Darshana, Ranjana), Charu Mathur	Centered upon the immortal, tender love of Radha and Krishna through devotional **Raslila** performances. It is distinguished by soft, undulating, lyrical movements in which the dancer's feet never strike the floor sharply. Female dancers wear an ornate, stiff cylindrical skirt known as the **Potloi** or *Kumin*. Performances are traditionally complemented by the energetic, acrobatic drum dance called **Pung Cholom**.
Mohiniyattam	**Kerala**	**Maharaja Swathi Thirunal** of Travancore, **Vallathol Narayana Menon**	Sunanda Nair, Bharati Shivaji, Kanak Rele, Gopika Varma	Literally meaning the "Dance of the Enchantress", this dance draws mythological inspiration from Lord Vishnu's Mohini incarnation. It is performed strictly as a solo feminine recital embodying pure **Lasya** (delicate, wave-like, swaying body movements resembling palm fronds). Performers are clad in a signature pristine off-white handloom saree embellished with a shimmering golden brocade border, known as the **Kasavu saree**.

9. Minerals of Uttar Pradesh & Uttarakhand (state-site map)

National mineral belts stay in the Minerals chapter. Daily sheet needs the **UP / UK places** that otherwise vanish (same gap as Hulas on the Indus table).

Mineral / resource	Uttar Pradesh	Uttarakhand	Trap
Limestone / cement	**Sonbhadra** (Churk, Dalla, Ghurma); also Banda–Mirzapur belt	**Dehradun**, Tehri, Pithoragarh, Pauri belts	Do not give Rajasthan's Makrana marble as a UP fact
Coal	**Singrauli coalfield** (Sonbhadra; shared with MP)	Negligible	Jharia / Raniganj are **Jharkhand–WB**, not UP
Silica sand / glass	**Shankargarh (Prayagraj)**, Banda; feeds **Firozabad** glass	—	Firozabad = glass craft; sand is Prayagraj belt
Bauxite	**Banda, Vindhyan** pockets (small)	—	Big bauxite = Odisha / Gujarat, not UP

Mineral / resource	Uttar Pradesh	Uttarakhand	Trap
Andalusite / sillimanite	**Sonbhadra / Mirzapur** (refractory)	—	
Magnesite	—	**Jhiroli / Bageshwar** (Kumaon) — India's important magnesite belt	Magnesite ≠ magnesium metal plant trap
Gypsum	—	**Dehradun / Nainital** foothill pockets	Rajasthan remains India's gypsum giant
Steatite / soapstone	—	**Almora / Pithoragarh** (also used in local craft)	
Copper (old)	—	**Askot (Pithoragarh)** — historic Kumaon copper	Khetri copper is **Rajasthan**
Rock phosphate	—	**Mussoorie / Durmala–Maldeota** (Dehradun)

Energy water	**Rihand / Govind Ballabh Pant Sagar** (Sonbhadra) — largest man-made lake by volume	**Tehri** (Bhagirathi–Bhilangana) — highest dam	Hydel ≠ mineral ore

Logic: Sonbhadra is UP's mineral hub (coal + limestone + refractories). **Bageshwar magnesite** and **Askot copper** are the UK pair. Do not park Rajasthan or Jharkhand fields in these two states.

A. ICAR 8 Soil Groups (% Share & Leading Characteristics)

1. **Alluvial Soil (~43.4% of total area — Largest)**:
2. **Genesis**: Deposited by Indus, Ganga, Brahmaputra river systems and coastal waves.
3. **Nutrient Profile**: **Rich in Potash and Lime**; severely **deficient in Nitrogen, Phosphorus, and Humus**.
4. **Classification**:
    - **Khadar**: New alluvium deposited by annual floods; fine loamy texture, highly fertile; light color.
    - **Bhangar**: Older alluvium situated above flood levels; clayey texture, less fertile; contains calcareous nodules (**Kankar**).
    - **Bhabar**: Narrow porous pebble-bed at foot of Shiwaliks where rivers disappear underground.
    - **Terai**: Marshy, waterlogged damp tract south of Bhabar with tall elephant grass; re-emerging streams.
5. **Crops**: Wheat, Rice, Sugarcane, Jute, Oilseeds, Maize, Pulses.
6. **Red & Yellow Soil (~18.6% — 2nd Largest Group)**:
7. **Genesis**: Weathering of ancient crystalline igneous (granites, gneisses) and metamorphic rocks in low-rainfall areas.
8. **Color Rationale**: Red color due to wide diffusion of **Iron (Ferric oxides)**; appears yellow when hydrated.
9. **Nutrient Profile**: **Deficient in Nitrogen, Phosphorus, Lime, and Humus**.
10. **Regions & Crops**: Tamil Nadu, Southern Karnataka, Telangana, Odisha, Chotanagpur, MP; ideal for millets, pulses, groundnut, tobacco.
11. **Black Soil / Regur / Tropical Chernozem (~15.2%)**:
12. **Genesis**: Weathering of basaltic lava rocks of the **Deccan Trap (Cretaceous lava flows)**.
13. **Distinctive Features**: Highly argillaceous (clayey >50%); swells and becomes sticky when wet; shrinks and develops wide deep cracks when dry (**"self-ploughing" capacity**); exceptional moisture-retention capability.
14. **Color**: Black color attributed to **Titaniferous Magnetite** and iron compounds.
15. **Nutrient Profile**: **Rich in Lime, Iron, Magnesia, Alumina, and Potash**; severely **deficient in Phosphorus, Nitrogen, and Organic Matter**.
16. **Regions & Crops**: Maharashtra, Gujarat, Malwa (MP), Northern Karnataka, Telangana; **Ideal for Cotton (Black Cotton Soil), Soyabean, Sugarcane, Citrus fruits**.
17. **Laterite Soil (~3.7%)**:
18. **Genesis**: Formed under conditions of **high temperature and alternating heavy wet and dry seasons with intense tropical rainfall**.
19. **Process**: Intense **leaching (desilication)** washes away silica and lime, leaving behind residual oxides of **Iron and Aluminium (Bauxite)**.
20. **Properties**: Highly acidic (pH 4.5–5.5); hardens like brick upon exposure to atmosphere (Latin *Later* = brick).
21. **Nutrient Profile**: Poor in Nitrogen, Phosphorus, Potash, Lime, and Humus.

25. **Saline & Alkaline Soils (Reh, Kallar, Usar, Rakar, Thur, Chopan) (~1.3%)**:
26. **Genesis**: Excessive canal irrigation in poorly drained arid/semi-arid regions causing high capillary action that pulls soluble sodium, calcium, and magnesium salts to topsoil.

27. **Reclamation**: Application of **Gypsum ($CaSO_4 \cdot 2H_2O$)** or Iron Pyrites to neutralize alkalinity; growing salt-tolerant green manure crops like **Dhaincha (*Sesbania*)**.

9. Fundamental Ecological Principles & Laws

A. Lindeman's 10% Energy Law (1942)

- Formulated by **Raymond Lindeman**.
- Only **approximately 10% of the energy** entering any trophic level is transferred and organized into organic matter at the next higher trophic level.
- 90% of energy is lost as metabolic heat, respiration, and catabolism.
- Explains why food chains rarely exceed 4 to 5 trophic levels.

B. Ecological Pyramids (Charles Elton, 1927)

1. **Pyramid of Energy**:
2. **ALWAYS UPRIGHT, WITHOUT EXCEPTION!**
3. Energy decreases progressively at each successive trophic level according to thermodynamics.
4. **Pyramid of Biomass**:
5. **Terrestrial Ecosystems (Grassland, Forest)**: **UPRIGHT** (Producer biomass > Herbivore > Carnivore).
6. **Aquatic Ecosystems (Pond, Lake, Ocean)**: **INVERTED** (Phytoplankton standing crop biomass is much smaller than zooplankton and predatory fish).
7. **Pyramid of Numbers**:
8. **Grassland & Cropland**: **UPRIGHT** (Millions of grasses support fewer herbivores, and even fewer carnivores).
9. **Tree / Parasitic Ecosystem**: **INVERTED** (A single large tree supports hundreds of birds, which host thousands of parasites and hyper-parasites).
10. **Forest Ecosystem**: **Spindle-shaped** (Few large trees support many herbivores, which are eaten by fewer carnivores).

C. Bioaccumulation vs Biomagnification

- **Bioaccumulation**: Increase in the concentration of a chemical pollutant in an **individual organism over time** (rate of intake > rate of excretion).
- **Biomagnification**: Progressive increase in the concentration of persistent, non-biodegradable, fat-soluble toxins (e.g., **DDT, Mercury, PCBs**) at **successively higher trophic levels** of a food chain.
- *Classic example:* Phytoplankton (0.00005 ppm) → Zooplankton → Small Fish → Fish-eating birds / Falcons (25 ppm causing egg-shell thinning and population collapse).

D. Greenhouse Gases: Global Warming Potential (GWP, 100-Year Horizon)

Ranked from highest warming impact per molecule to lowest (relative to CO2 = 1):

SF6 (23,500) > PFCs (7,000–9,000) > HFCs (1,400–3,000) > N2O (273) > CH4 (28) > CO2 (1)

- **Water Vapour**: Most abundant natural greenhouse gas contributing greatest share to natural greenhouse effect (~60%), but has short atmospheric residence time.
- **Carbon Dioxide (CO2)**: Primary anthropogenic driver of global climate change due to massive volume and century-long residence time.
- **Methane (CH4)**: Major sources: Paddy/rice fields, ruminant livestock enteric fermentation, landfills, wetlands, coal mining.

13. Biodiversity Hotspots of India & Global Criteria

A. Global Criteria for Biodiversity Hotspot (Norman Myers, 1988)

To qualify as an international biodiversity hotspot, a biogeographic region must fulfill **TWO STRICT QUANTITATIVE CRITERIA**: 1. **High Endemism**: It must contain at least **1,500 species of vascular plants (>0.5% of the world's total) as endemics** (species found nowhere else on Earth). 2. **High Degree of Threat**: It must have lost at least **70% of its original**

primary native vegetation (i.e., has 30% or less of its original natural habitat remaining). - Globally, there are **36 recognized Biodiversity Hotspots** covering only 2.5% of Earth's land surface, but supporting over 50% of world's endemic plant species and 43% of endemic bird, mammal, reptile, and amphibian species.

B. The 4 Biodiversity Hotspots Covering India

1. National Income Aggregates & Macroeconomic Formulas

Concept / Metric	Formula / Technical Definition	Key Exam Traps & Prelims Triggers
GDP at Market Price	$GDP_{MP} = C + I + G + (X - M)$	Total market value of all final goods & services produced **within the domestic territory** in 1 year. Foreigners earning in India included; Indians earning abroad excluded.
GNP at Market Price	$GNP_{MP} = GDP_{MP} + NFIA$	Measures income earned by **nationals/citizens** regardless of geographical location. $NFIA$ = Net Factor Income from Abroad (Factor income from abroad $-$ Factor income paid abroad).
NNP at Market Price	$NNP_{MP} = GNP_{MP} - \text{Depreciation}$	Deducts consumption of fixed capital (depreciation). **Depreciation is also called Capital Consumption Allowance**.
NNP at Factor Cost (National Income)	$NNP_{FC} = NNP_{MP} - \text{Net Indirect Taxes (NIT)}$	Traditional official definition of **National Income**. Net Indirect Taxes (NIT) = Indirect Taxes $-$ Subsidies.
Gross Value Added (GVA)	$GVA_{Basic} = GVA_{Factor Cost} + \text{Production Taxes} - \text{Production Subsidies}$	Since 2015, India measures headline GDP as: **$GDP_{MP} = GVA_{Basic} + \text{Product Taxes} - \text{Product Subsidies}$**. Base year changed to **2011–12**.
Personal Disposable Income (PDI)	$PDI = \text{Personal Income} - \text{Direct Taxes} - \text{Miscellaneous Fees/Fines}$	Actual income available to households for consumption expenditure and savings.
Real GDP vs Nominal GDP	$\text{Real GDP} = \frac{\text{Nominal GDP}}{\text{GDP Deflator}} \times 100$	Real GDP is calculated at **constant base year prices** (eliminates inflation impact). Nominal GDP is at current prices.
GDP Deflator	$\frac{\text{Nominal GDP}}{\text{Real GDP}} \times 100$	Most comprehensive measure of inflation in an economy because it covers **all goods and services** produced, unlike CPI/WPI which use a fixed basket.

Examiner Trap: Transfer payments (old age pensions, unemployment allowance, student scholarships) are **excluded** from National Income because no corresponding production of goods or services occurs. Second-hand goods sales are also excluded (only broker commission is included).
