2.1 Fertility Analytics: Replacement Level & Component Rates

A. Total Fertility Rate (TFR) Mechanics

The Total Fertility Rate is the most standard, cross-nationally comparable measure of fertility. - **Definition**: The average number of children that would be born alive to a woman during her lifetime if she were to pass through her childbearing years (15–49) conforming to the age-specific fertility rates of a given year. - **Replacement Level Fertility (TFR = 2.1)**: - The level of fertility at which a population exactly replaces itself from one generation to the next without migration. - Why **2.1** and not 2.0? Because slightly more males are born than females (natural Sex Ratio at Birth is ~105 boys per 100 girls), and some female children die before reaching their reproductive age (15 years). In high-mortality developing countries, replacement TFR can be as high as 2.3 to 2.5. - **Determinants of Falling Fertility in India**: 1. Female education and secondary school completion. 2. Increase in mean female age at marriage. 3. Contraceptive Prevalence Rate (CPR — reached **67%** in NFHS-5). 4. Urbanisation and nuclearisation of families. 5. Reduction in Infant Mortality Rate (lower child loss reduces the desire for "insurance births").

2.2 Maternal Health & Key Government Schemes

1. **Janani Suraksha Yojana (JSY, April 2005)**: - Safe motherhood intervention under the National Health Mission to reduce maternal and neonatal mortality by promoting **institutional delivery** among poor pregnant women. - **Cash Assistance in Low Performing States (LPS like UP, Bihar, MP, Rajasthan)**:
   - Rural Mothers: **Rs 1,400** (+ Rs 600 ASHA incentive).
   - Urban Mothers: **Rs 1,000** (+ Rs 400 ASHA incentive).
2. **Janani Shishu Suraksha Karyakram (JSSK, June 2011)**: - Entitles all pregnant women delivering in public health institutions to **absolutely free and zero expense deliveries**, including free caesarean sections, free drugs, free diagnostics, free diet during hospital stay, and free transport from home to hospital and back. - Extends identical free entitlements to all sick neonates up to 1 year of age.
3. **Pradhan Mantri Surakshit Matritva Abhiyan (PMSMA)**: - Provides assured, comprehensive, and quality antenatal care (ANC) on the **9th day of every month** free of cost to all pregnant women in their 2nd and 3rd trimesters by specialist doctors.
4. **Mission Indradhanush (Launched 25 December 2014)**: - Immunization drive to achieve > 90\% full immunization coverage for children up to 2 years of age and pregnant women. - Protects against **12 Vaccine-Preventable Diseases**: Diphtheria, Pertussis, Tetanus, Polio, Measles, Rubella, severe childhood Tuberculosis, Hepatitis B, Meningitis and Pneumonia caused by *Haemophilus influenzae* type B (HiB), Rotavirus, Pneumococcal Conjugate (PCV), and Japanese Encephalitis (JE in endemic districts).

Bilingual Terminology — Fertility, Mortality, Health and Population Policy (प्रजनन, मृत्यु दर, स्वास्थ्य एवं जनसंख्या नीति)

English Term	हिंदी पारिभाषिक शब्द	Key Anchor
Family Planning	परिवार नियोजन	India: world's first national Family Planning Programme (1952)
National Population Policy	राष्ट्रीय जनसंख्या नीति	NPP 2000; target TFR 2.1 by 2010
Total Fertility Rate (TFR)	कुल प्रजनन दर (TFR)	India TFR ~2.0 (SRS 2020)

English Term	हिंदी पारिभाषिक शब्द	Key Anchor
Contraceptive Prevalence Rate	गर्भनिरोधक प्रसार दर	CPR — % women using contraception
Infant Mortality Rate (IMR)	शिशु मृत्यु दर	Deaths under 1 yr per 1,000 live births; India ≈ 28 (SRS 2020)
Neonatal Mortality Rate	नवजात मृत्यु दर	Deaths in first 28 days per 1,000 live births
Maternal Mortality Ratio (MMR)	मातृ मृत्यु अनुपात	Deaths per 1,00,000 live births; India ≈ 103 (2017–19)
Under-Five Mortality Rate	5 वर्ष से कम मृत्यु दर (U5MR)	Deaths under 5 years per 1,000 live births
Stillbirth	मृत शिशु जन्म	Baby born dead after 28 weeks of pregnancy
Sex Ratio at Birth (SRB)	जन्म के समय लिंगानुपात	Reflects female foeticide; declining trend in India
Age-Specific Fertility Rate	आयु-विशेष प्रजनन दर	Births per 1,000 women in specific age group
Life Expectancy	जीवन प्रत्याशा	India ≈ 69.7 years (2015–19 SRS)
Mission Parivar Vikas	Mission Parivar Vikas	MOHFW scheme for high-TFR districts
ASHA	मान्यता प्राप्त सामाजिक स्वास्थ्य कार्यकर्ता	Accredited Social Health Activist under NHM

Extended Theory — Population Policy History of India (भारत की जनसंख्या नीति का इतिहास)

```
INDIA'S POPULATION POLICY TIMELINE
──────────────────────────────────

1952 ── First National Family Planning Programme
         (World's first national-level programme)
         Focus: Rhythm method, spacing
|
1976 ── Emergency-era coercive sterilisation
         (Massive public backlash)
         Indira Gandhi government
|
1977 ── Programme renamed "Family Welfare"
         (Voluntary approach restored after Emergency)
|
1994 ── ICPD Cairo (International Conference on
         Population and Development)
         India's commitment: reproductive rights,
         gender equity, voluntary family planning
|
2000 ── NATIONAL POPULATION POLICY, 2000
         Vision: Achieve TFR 2.1 by 2010
```

```
                Long-term goal: stable population by 2045
                Key features:
                  • Girl education priority
                  • Universal immunisation
                  • 80% institutional deliveries
                  • Making contraceptives freely available
        |
        2019 ── Mission Parivar Vikas
                Target 146 high-fertility districts (TFR > 3)
                across UP, Bihar, MP, Rajasthan, Chhattisgarh,
                Jharkhand, Assam
        |
        2023 ── India surpasses China as world's most
                populous country (~1.43 billion)
```

NFHS-5 Key Findings (2019–21) vs NFHS-4 (2015–16)

Indicator	NFHS-4 (2015–16)	NFHS-5 (2019–21)	Trend
TFR	2.2	**2.0**	↓ Below replacement level
IMR	40.7	**35.2**	↓ Improving
U5MR	49.7	**41.9**	↓ Improving
Stunted children (< 5 yrs)	38.4%	**35.5%**	↓ Improving
Wasted children	21.0%	**19.3%**	↓ Improving
Anaemia (women 15–49)	53.0%	**57.0%**	↑ WORSENING
Institutional births	78.9%	**88.6%**	↑ Improving
CPR (Modern methods)	47.8%	**56.5%**	↑ Improving
Women with ≥ 10 yrs education	35.7%	**41.0%**	↑ Improving

One-Liner Revision — Fertility, Mortality, Health

#	Fast Fact
1	India's National Family Planning Programme = world's **first (1952)**
2	NPP 2000 target = TFR **2.1 by 2010** (missed); stable population by **2045**
3	India TFR (NFHS-5 2019–21) = **2.0** (below replacement level)
4	India IMR (SRS 2020) ≈ **28** per 1,000 live births
5	India MMR (SRS 2017–19) ≈ **103** per 1,00,000 live births
6	India Life Expectancy ≈ **69.7 years** (2015–19)

#	Fast Fact
7	NFHS implemented by **IIPS Mumbai** under MoHFW
8	NFHS-5 (2019–21): anaemia in women worsened to **57.0%**
9	NFHS-5: institutional births improved to **88.6%**
10	ASHA = **Accredited Social Health Activist** (NHM)
11	Mission Parivar Vikas = 146 high-TFR districts (UP, Bihar, MP, etc.)
12	Neonatal mortality = deaths in **first 28 days** of life
13	Highest IMR State (2020 SRS) ≈ **Madhya Pradesh**
14	Lowest IMR State ≈ **Kerala** and **Goa**
15	MMR target (SDG 3.1) = **< 70 per 1,00,000** live births by 2030
